Data is Messy

Colin Jemmott DSC 96

Data Types

Many different data types exist. Common types include:

- Integers
- Floating-point numbers
- Strings
- Booleans

Even with these simple types, data can often be "messy" or bad". What might go wrong?

Missing Values

- Null
- NaN
- 0, -1 or "" instead of null
- 1900 and 1970
- "Null Island" at 0°00'00.0"N+0°00'00.0"E

Related: missing data that you know should be there

how many states should be listed in national data?

Null Island is one of the most popular jogging locations according to the Strava fitness tracking app. https://en.wikipedia.org/wiki/Null_Island

Dates and Units

Which date is in September?

- 10/9/18
- 9/10/18

Object A is listed as "weight=87". Can you lift it?

Does "Los Angelos" == "Los Angeles"?

Numbers and "Numbers"

1537660383 looks like a number, but is probably a date (Unix timestamp)

"USD 1,000,000" looks like a string, but is actually a number and a unit.

02111 looks like a number, but is really a zip code (and isn't equal to 2,111)

Strings

Other data types

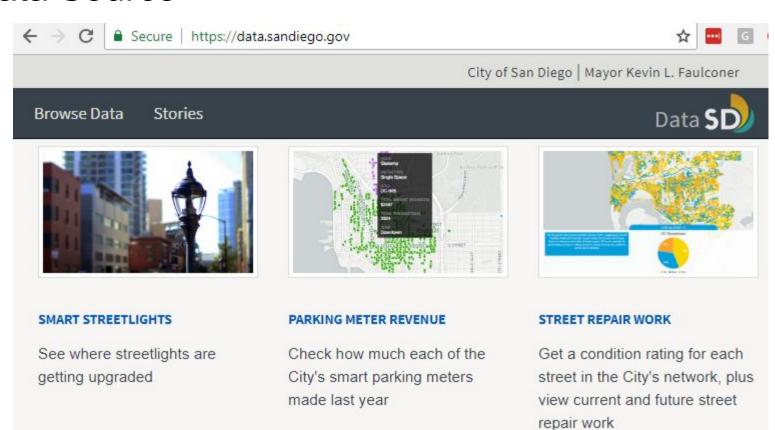

Data doesn't always come in in nicely formatted packages.

- CSV, escaping, and the lack of standards
- Data are in a PDF what now?
- Images and sound recordings as data

Vehicle Stop Data

DSC 96

Data Source

Why Police Data?

Police Vehicle Stops

Vehicle stops made by the San Diego Police Department. Vehicle Stops files contain all vehicle stops for a given year.

Vehicle Stops (year-to-date)

This is a preview. If you would like to view the full resource, please download it above.

1444802	Equipment Violation	120	Н	М	24	2017-0
1444912	Equipment Violation	440	В	М	45	2017-0

SDPD Vehicle Stop Data

- 1. Plot count of stops by age. Notice any issues? What should we do?
- 2. Make some time series plots! For example, stops by hour of day, day of week, month, etc. might be interesting.
- 3. Explore the "stop cause" variable. Notice any issues? What should we do?

Finally, explore and answer questions. When you find bad data, bring it up to the class.
